

To-Do App Project Roadmap

Goal: Build a To-Do App without following tutorials. You write the code; review and hints guide the process.

Rules

1. Build step by step.
2. Test each feature.
3. Commit to Git after major milestones.

Phase 1: Basic App

- HTML structure: Title, Input, Add button, Task area.
- CSS: Simple responsive layout.
- JS: Read input, button click, display task.

Phase 2: Delete Tasks

- Add delete button.
- Remove selected task.

Phase 3: Complete Tasks

- Mark complete.
- Visual styling for completed items.

Phase 4: Local Storage

- Save tasks.
- Restore after refresh.

Phase 5: Filters

- All, Completed, Pending.

Phase 6: Edit Tasks

- Update existing tasks.

JavaScript Concepts

- DOM manipulation
- `addEventListener()`
- `createElement()`
- `appendChild()`
- `remove()`
- Arrays
- Loops
- Local Storage
- CRUD basics

Project Workflow

Build -> Test -> Commit -> Push -> Next Feature.
